**DUMBBELLS**  
**Owner's Manual**

Patent #6,422,979 other USA and Foreign Patents Pending

## Preface

Congratulations on the your purchase of the Bowflex® SelectTech™ Dumbbell set. This innovative dumbbell is a versatile training tool that will help you reach your fitness goal. This product has been carefully engineered and manufactured to provide a wide array of weight options starting at 5 lbs and going all the way up to 52.5 lbs. In order to utilize this product to its fullest extent, it is critical that you read and fully understand this owner's manual prior to using the SelectTech™ dumbbell.

## Important symbols

The following definitions apply to the words “Danger” and “Warning” found throughout this manual.

**Danger** - Used to call attention to IMMEDIATE hazards that, if not avoided, will result in immediate, serious personal injury or loss of life.

**Warning** - Used to call attention to POTENTIAL hazards that could result in personal injury or loss of life.

## **IMPORTANT SAFETY INSTRUCTIONS**

1. Read and fully understand all instructions contained in this manual prior to using the product.
2. This product is intended for home use only and is not suitable for commercial application.
3. Never allow children to use or play near this equipment. Teenagers under the age of 18 must always have parental supervision and instruction on the use of this product.
4. Inspect the dumbbells prior to each use. Do not use a dumbbell with worn or damaged parts.
5. Periodically inspect and test the locking mechanism for proper function. Follow the test procedures included in this manual.
6. Never attempt to force the adjustment knob to rotate when the dumbbell has been removed from the dumbbell base.
7. Never allow the dumbbells to drop freely to the ground. Damage to the product and potential personal injury may occur. Please see the warranty section for specific warranty limitations related to dropped dumbbells.
8. Never allow dumbbells to forcefully bump together during use. Damage to the product and potential personal injury may occur.
9. Never attempt to disassemble your SelectTech™ Dumbbell handle, or base assembly—the product is not designed to be user serviced. Contact your Bowflex retailer or Bowflex directly for service.
10. Before beginning your workout, make certain that your surroundings are free from potential interference.
11. The SelectTech™ dumbbells are very heavy; if you are not using the optional SelectTech™ Dumbbell Stand we suggest you place the dumbbell assembly directly on the floor for best support.

## Product Specifications and Terms

**Dumbbell Assembly  
Weight = Approx. 58 lbs.**

## Getting to know your Bowflex® SelectTech™ Dumbbells

The Bowflex SelectTech dumbbells are shipped fully assembled, one dumbbell to a box. After carefully removing the dumbbell from its box, there are some initial steps that should be taken to familiarize you with the function of the product and to assure that all aspects of the dumbbell are performing according to their specifications.

1. After removing the dumbbell from its protective packaging, push down slightly on the handle assembly to make sure it is fully depressed into the base.
2. Rotate each adjustment knob several full rotations to make sure it is turning freely—do this in both directions. Make sure there is a click at each weight increment of the adjustment knob. This click will help you locate the proper alignment to select a given weight increment.
3. You will notice that there are weight increments from 5 to 52.5 lbs on both adjustment knobs. To properly select a given weight (20 lbs for example), both adjustment knobs should be rotated until 20 is aligned with the arrow located on the outward edge of the Bowflex nameplate (Fig.1).
4. After confirming the proper rotational function of the adjustment knob, turn each adjustment so that the number 5 is aligned with the arrow in the Bowflex nameplate.
5. With both adjustment knobs set to 5, pull the handle straight up from the dumbbell. This will remove just the handle from the base, leaving all of the weight plates standing in the base (Fig. 2.). The handle without plates represents the starting weight of 5 lbs.

Figure 1

Figure 2

6. You may increase the selected weight by rotating each adjustment knob clockwise.
7. The dumbbell handle and weight plates are symmetrical. This means that one may insert the handle with either end facing the user provided that you have selected the same weight number on both ends of the dumbbell.
8. When either returning or removing the dumbbell to or from the base, do so in a vertical motion, perpendicular to the base. Try not to tilt the dumbbell or move it laterally (parallel to the base) until it is fully clear of the unselected weight plates.

*Weight will increment in the following 15 steps:*

5	7.5	10	12.5	15	17.5	20	22.5	25	30	35	40	45	50	52.5
---	-----	----	------	----	------	----	------	----	----	----	----	----	----	------

## Understanding and testing the locking mechanism function

The Bowflex® SelectTech™ Dumbbell features a patent pending locking mechanism designed to assure proper and complete selection of the weight plates as well as to ensure weight plate retention during the workout. It is important that you fully understand the function of this mechanism and periodically test it to ensure it is properly functioning.

### Function

The locking mechanism provides two key functions:

1. The mechanism will only allow the adjustment knobs to be rotated when the dumbbell handle is completely inserted and engaging the dumbbell base.
2. The mechanism is designed to lock the dumbbell handle to the base if either adjustment knob is not fully engaging the selected weight plates.

### Purpose

The locking mechanism serves two important purposes:

1. The mechanism will prevent deselecting (dropping) weight plates from the dumbbell when it is NOT in the dumbbell base.
2. The mechanism will prevent partial selection of the weight plates in which the plates are not fully supported and the locking pin is not fully engaged.

Given the importance of this locking mechanism, it is critical that you understand how it operates and how to periodically test it to make sure it is functioning correctly.

### Testing proper locking mechanism function

1. With the dumbbell handle set in the dumbbell base, turn both adjustment knobs to the number 5. You will know you have fully and correctly selected the number when you feel the adjustment knob settle into a notch (known as a detent). You will also hear a slight, but audible, clicking noise that corresponds with the detent locations for each number. 
2. You should be able to withdraw the handle from the base leaving all the weight plates behind.

3. With the handle removed from the base, grab one adjustment knob with your other hand and gently attempt to turn the knob, the knob should not rotate. A locking pin in the mechanism will have engaged the rotational assembly when the unit was withdrawn from the base. Perform this test with all adjustment knobs.

**WARNING**

Do not use a great deal of force in an attempt to turn the locked adjustment knob. Excessive force may damage the locking mechanism.

4. After confirming the proper function of the locking mechanism as described above, return and fully insert the dumbbell handle back into the base assembly.
5. With the handle back in the base, turn the adjustment knob on one side to a position that is in-between the 5 and 7.5 number. This represents an incomplete weight selection where the adjustment knob has not fully selected a weight and the knob is in-between the selection detents (clicks).
6. With the selection knob in this improper position, gently attempt to lift up on the handle to remove it from the base. You should find that the handle is locked to the base and cannot be removed with light pressure as it can normally. 
7. Return the improperly selected adjustment knob to a full and proper weight selection and assure that the dumbbell handle can once again be removed.
8. Repeat this test for all adjustment knobs.
9. Assure the entire dumbbell handle assembly is properly tightened. Do this by setting the adjustment knobs to five pounds and removing the handle assembly from the base. Grab both adjustment knobs and very slightly push and pull the knobs toward and away from the handle grip. The knobs should not exhibit free play and all of the selection discs should feel tightly connected.
10. You have now tested the function of the locking mechanism. We suggest you repeat this test periodically (once a month) to confirm the proper function of the locking mechanism.

**WARNING**

Do not intentionally engage the locking mechanism and attempt to lift the entire dumbbell via the grip. The dumbbell should only be lifted by using the lift handles molded into the base assembly.

**DANGER**

If the dumbbell locking mechanism fails to perform in accordance with the test procedure above, do the following things:

1. Discontinue use of the product immediately until proper service can be provided.
2. Contact your Bowflex retailer or contact Bowflex directly by phone at 1-800-605-3369 for service.

### Offset weight selection

As indicated above, proper selection for a given weight is accomplished by selecting that weight number on both ends of the dumbbell. For example: to select 20 lbs, one must dial both adjustment knobs on the dumbbell to the number 20. By selecting the same number on both sides of the dumbbell, you will replicate a common dumbbell, this is to say, a balanced dumbbell with equal weight on both sides. While this is the most common form of weight selection and will be used in the vast majority of workouts, the Bowflex SelectTech™ Dumbbell offers a useful and unique workout alternative known as offset weight selection. Offset weight selection involves using a different weight setting on one side of the dumbbell relative to the other. Doing so can be a powerful muscle development tool during certain workouts, such as the biceps curl. The SelectTech Dumbbell

functions exactly the same way whether you have selected balanced or offset weights. The only exception is that when you are using offset weights, you must return the dumbbell to the base in the same orientation that you removed it. When you have offset weight selection the combination of weight plates selected will not be the same on both sides of the dumbbell. You must therefore make certain to return the dumbbell to the base in the same orientation in which it was removed, in order for the weight plates to settle back into the corresponding vacant slots in the dumbbell base.

### Example of offset weight selection workout

Performed traditionally, dumbbell curls strengthen the biceps, but do little for the forearm muscles that assist in supination and pronation of the wrist. Supination and pronation are terms describing a rotating motion of the wrist. For example, turning a doorknob and turning your key in your car's ignition are examples of supination and pronation. Turning a doorknob clockwise would be the supination direction, while counter-clockwise would be the pronation direction. Whether you are training for a specific sport, or just training to become stronger and improve activities of daily living, training your forearm muscles that are involved in supination and pronation can be beneficial.

These dumbbells allow you to train differently than traditional dumbbells. By using different weight settings on either side of the dumbbells, you can use those supination/pronation muscles during your curls. Using more weight on the thumb side of the dumbbell will improve pronation strength, while more weight on the little finger side will improve supination strength. Not only will you be strengthening your biceps, but also you can become stronger in activities involving rotation of the wrist!

The following example of a Biceps Curl using offset weight is a good demonstration of the superior muscle development provided by the SelectTech Dumbbell.

	Side 1	Side 2	Total dumbbell weight
<b>Weight settings selected</b>	<b>20lbs</b>	<b>30 lbs</b>	<b>25 lbs</b>
<b>Weight Difference</b>		<b>Δ 10 lbs</b>	
<b>Weight Distribution</b>	<b>10 lbs</b>	<b>15 lbs</b>	<b>25 lbs</b>
<b>Weight offset</b>		<b>+ 5 lbs</b>	

## Troubleshooting guide

Problem	Solution
Dumbbell handle does not fully insert into base when no plates are selected (handle has no plates attached).	<ol style="list-style-type: none"> <li>1. Make certain that both adjustment knobs are set directly to the number 5.</li> <li>2. Make certain that all of the weight plates have the “selection tongue” facing away from the dumbbell grip. If one or more of these are backwards (selection tongue facing inward toward grip), the handle can get blocked, and the plates may wedge into the handle.</li> </ol>
Dumbbell handle does not fully insert into base when plates are selected (handle has plates attached).	<ol style="list-style-type: none"> <li>1. Check to see if you have selected different weights on each side of the dumbbell (for example one adjustment knob is set to 5 and the other is set to 7.5). If this is the case, you must replace the dumbbell in the base with the same orientation in which was withdrawn. This is to allow the plates to settle back into the correct and vacant openings in the base.</li> <li>2. Verify that the plates not selected (those plates remaining in the dumbbell base) are in their correct spots and have not been moved to a different support slot. This may be blocking the dumbbell from fitting back into the base.</li> <li>3. See solution #2 from problem above.</li> </ol>
Adjustment knob will not turn while handle is in base.	<ol style="list-style-type: none"> <li>1. Check to assure that the dumbbell handle is fully depressed into the dumbbell base. If not fully depressed, the locking mechanism will not be released and may be keeping the adjustment knobs from rotating.</li> <li>2. Check to see if any weight plates have been put into the base assembly backwards with the “support tongue” facing the grip of the dumbbell handle. All weight plates must have the selection tongue facing away from the grip of the dumbbell handle.</li> <li>3. Check to see if there is any dirt, debris or other obstruction in the dumbbell base. You may need to remove the weight plates from the base to accomplish this check. Remember to put each weight plate back in its appropriate location with the selection tongue facing away from the dumbbell grip.</li> </ol>

## Bowflex® SelectTech™ Dumbbell Stand (optional)

This attractive stand features an ergonomic design to enhance the functionality of the SelectTech.

- The V-shape “step-in” design allows the user to maintain proper upper body position while lifting or returning the dumbbells to the base.
- The dumbbell handles are positioned in a natural orientation providing a comfortable and secure lifting position.
- Large adjustable stabilizer feet assure maximum stability.
- Includes two “seat belts” to secure dumbbells to the base.
- Integrated towel rack.
- Dimensions (without dumbbells): 20 1/4" (L) x 24 1/2" (W) x 24 1/4" (H)

Check out the selection of products available from Bowflex at [www.bowflexselecttech.com](http://www.bowflexselecttech.com)

## SelectTech 6 Week Challenge

FREQUENCY: 3-Days a Week

TIME: About 30 minutes

For a successful workout, focus on generating the muscular contraction required to create the motion of the weight (demonstrated in your “The Secrets of the 4-Step Rep” DVD) not just lifting the weight.

# of Reps: 8-12 (30 to 40 second intervals between sets)

Workout 1	Set #1		Set #2		Set #3

## Leg Exercises

### Wide Squats

#### Muscles worked

Quadriceps, glutes, hamstrings and adductors

#### Success tips:

- Keep the knees pointed in the same direction as the toes.
- Keep the head and neck in line with the trunk.
- Pay close attention to all alignment and stabilization issues on every part of each and repetition.

START

START

- Grab the dumbbell with both hands and stand with you feet slightly wider than shoulder width apart.
- Slightly rotate your hips outward, feet and knees should be lined up in that outward position as well.
- Stabilize your torso by lifting your chest, tightening your abs and maintaining a slight arch in your lower back.

FINISH

ACTION

- Under control, slowly squat down by sticking the hips back as the knees start to bend.
- Keep the chest up and the and back flat as the hips continue to move backward.
- Lower to approximately 90 degrees at the knees, unless otherwise determined.
- Return to the starting position.
- Do not lockout the knees at the top of the squat.

### Calf Raises

#### Muscles worked

Gastrocnemius and soleus

#### Success tips

- Do not change your hip or knee position during the exercise.
- Rise up as high as you can, maintaining your balance, on the balls of your feet.

START

START

- Stand with your feet about shoulder width apart, feet facing straight forward.
- Hold the dumbbells at your sides with your palms facing in.
- Keep your chest lifted, abs tight and a slight curve in your lower back.

FINISH

ACTION

- Slowly rise up on the balls of your feet, lifting your heels as high as you can off the floor.
- Slowly return to the starting position, keeping tension on the calf muscles.

## Leg Exercises

### Stationary Lunges

#### Muscles worked

Quadriceps, glutes, hamstrings and adductors

#### Success tips

- Place feet in a position so that when you lunge down, your front foot is directly under your knee and your back leg lines up under your hip.
- Keep your head and chest lifted, with a slight arch in the lower back during the movement.
- Do only one side to fatigue, then switch to the other side.

START

START

- Stand with one foot forward and one foot backward in a position so when you move to the bottom of the lunge, you front foot is under your knee and you back knee is directly under you hip.
- Hold the dumbbells at your sides with your palms facing inward.
- Keep the chest lifted, abs tight and a slight arch in the lower back.

FINISH

ACTION

- Slowly lower your body bending at both knees, simultaneously keeping the front knee in line with the toes.
- Move down and stop just before the back knee is going to touch the floor.
- Reverse the motion and come back up to the starting position.

### Stiff-leg Dead Lift

#### Muscles worked

Hamstrings, glutes and spinal erectors

#### Success tips

- Your torso should move from standing vertical to leaning forward at the hips without rounding your spine during any part of the movement.
- Keep the knees slightly bent.
- Only move as far as you can correctly.
- It is critical that you keep the chest lifted and do not allow your spine to round at any time during the movement.

START

START

- Stand with your feet approximately shoulder width apart
- Hold the dumbbells down in front of your thighs with your palms facing back.
- Stand with a very slight bend at the knees.
- Keep the chest lifted, abs tight and a very slight arch in your lower back.

FINISH

ACTION

- Maintaining your knee position, slowly bend forward at the hips moving your butt backward.
- Stop as your hamstrings begin to get taut and before your back begins to round.
- Concentrate on tensing your hamstrings to pull you back up to the starting position.

## Leg Exercises

### Reverse Lunge

#### Muscles worked

Quadriceps, glutes, hamstrings and adductors

#### Success tips

- Place feet in a position so that when you lunge back, your front foot is directly under your knee and your back leg lines up under your hip.
- Keep your head and chest lifted, with a slight arch in the lower back during the movement.
- Do only one side to fatigue and then switch to the other side.

START

**START**

- Stand with your feet together.
- Hold the dumbbells at your sides with your palms facing inward.
- Keep the chest lifted, abs tight and a slight arch in the lower back.

FINISH

**ACTION**

- Initiate the movement by tightening your glutes and slowly pivoting your leg from your hip. Move your entire leg backward, keeping your knee steady at a 90 degree angle.
- Slowly move your leg as far as you can, without allowing any movement at the waist, knee or lower back.
- Slowly return to start position.

## Chest Exercises

### Flat Chest Press

#### Muscles worked

Pectoralis major, deltoids and triceps

#### Bench position

Flat

#### Success tips

- Maintain a 60-90 degree angle between your upper arms and torso at the start of the motion, and a 90 degree angle from your torso at the top.
- Keep knees bent so your feet are positioned flat on the floor directly under your knees.
- Do not let your elbows travel behind your shoulders when you are lowering the dumbbells.
- Keep shoulder blades pinched together and maintain good spinal alignment.

START

**START**

- Grab the dumbbells and lie back on the bench.
- Bend your elbows back keeping your arms at approximately 60-90 degrees away from your sides, and your elbows equal to your shoulder.
- Keep your arms directly in line with the dumbbell, over your wrists and elbows.
- Raise your chest, pinch your shoulder blades together and maintain a comfortable arch in your lower back.

FINISH

**ACTION**

- Slowly press the dumbbells upward, straightening your arms while moving the dumbbells toward each other, directly over the center of your chest.
- Don't lock out your elbows, keep the tension on the chest.
- Slowly return to the starting position, keeping your wrists steady and your movements slow and controlled.

### Incline Chest Press

#### Muscles worked

Pectoralis major, deltoids and triceps

#### Bench position

Inclined to 45 degrees

#### Success tips

- Maintain a 60-90 degree angle between your upper arms and torso at the start of the motion and slightly more than 90 degrees from your torso at the top.
- Keep knees bent so your feet are positioned flat on the floor directly under your knees.
- Do not let your elbows travel behind your shoulders when you are lowering the dumbbells.
- Keep shoulder blades pinched together and maintain good spinal alignment.
- Keep your arms directly in line with the dumbbell over your wrists and elbows.

START

**START**

- Grab the dumbbells and lie back on the bench.
- Bend your elbows back, keeping your arms at approximately 60-90 degrees away from your sides, and your elbows equal to your shoulder.
- Raise your chest, pinch your shoulder blades together and maintain a comfortable arch in your lower back.

FINISH

**ACTION**

- Slowly press the dumbbells upward, straightening your arms while moving the dumbbells toward each other, directly over the center of your chest.
- Don't lock out your elbows, keep the tension on the chest.
- Slowly return to the starting position, keeping your wrists steady and your movements slow and controlled.

## Chest Exercises

### Flat Chest Fly

#### Muscles worked

Pectoralis major and deltoids

#### Bench position

Flat

#### Success tips

- Maintain a 60-90 degree angle between your upper arms and torso at the start of the motion, and slightly more than 90 degrees from your torso at the top.
- Keep knees bent so your feet are positioned flat on the floor directly under your knees.
- Do not let your elbows travel behind your shoulders when you are lowering the dumbbells.
- Keep shoulder blades pinched together and maintain good spinal alignment.

START

START

- Grab the dumbbells and lie back on the bench.
- Rotate your upper arms away from your torso so that your elbows and palms are pointing upward.
- Maintain a slight bend at the elbow and stabilize your wrist in a neutral position.
- Raise your chest, pinch your shoulder blades together and maintain a comfortable arch in your lower back.

FINISH

ACTION

- Slowly move the dumbbells forward, then upward, keeping your arms stable at the elbow, while moving the dumbbells toward each other directly over the center of your chest.
- Keep the tension on the chest throughout the movement.
- Slowly return to the starting position, keeping your wrists steady and your movement slow and controlled.

## Chest Exercises

### Decline Chest Press

#### Muscles worked

Pectoralis major, deltoids and triceps

#### Bench position

Declined

#### Success tips

- Maintain a 60-90 degree angle between your upper arms and torso at the start of the motion, and 90 degree angle from your torso at the top.
- Keep knees bent so your feet are positioned flat on the floor directly under your knees.
- Do not let your elbows travel behind your shoulders when you are lowering the dumbbells.
- Keep shoulder blades pinched together and maintain good spinal alignment.
- Keep your arms directly in line with the dumbbell over your wrists and elbows.

START

START

- Grab the dumbbells and lie back on the bench.
- Bend your elbows back, keeping your arms at approximately 60-90 degrees away from your sides, and your elbows equal to your shoulder.
- Raise your chest, pinch your shoulder blades together and maintain a comfortable arch in your lower back.

FINISH

ACTION

- Slowly press the dumbbells upward, straightening your arms while moving the dumbbells toward each other, directly over the center of your chest.
- Don't lock out your elbows, keep the tension on the chest.
- Slowly return to the starting position, keeping your wrists steady and your movements slow and controlled.

### Incline Chest Fly

#### Muscles worked

Pectoralis major and deltoid

#### Bench position

Inclined 45 degrees

#### Success tips

- Maintain a 60-90 degree angle between your upper arms and torso at the start of the motion, and slightly more than 90 degrees from your torso at the top.
- Keep knees bent so your feet are positioned flat on the floor directly under your knees.
- Do not let your elbows travel behind your shoulders when you are lowering the dumbbells.
- Keep shoulder blades pinched together and maintain good spinal alignment.

START

START

- Grab the dumbbells and lie back on the bench.
- Rotate your upper arms away from your torso so that your elbows and palms are pointing upward.
- Maintain a slight bend at the elbow and stabilize your wrist in a neutral position.
- Raise your chest, pinch your shoulder blades together and maintain a comfortable arch in your lower back.

FINISH

ACTION

- Slowly move the dumbbells forward, then upward, keeping your arms stable at the elbow. Move the dumbbells toward each other directly over the center of your upper chest.
- Keep the tension on the chest throughout the movement.
- Slowly return to the starting position.

## Arm Exercises

### Standing Curls

#### Muscles worked

Biceps and other elbow flexors

#### Success tips

- Keep elbows at your sides.
- Keep your wrists straight.
- Keep your trunk muscles tight and maintain a very slight arch in your lower back.

#### START

- Hold the dumbbells with your hands facing forward.
- Stand with your upper arms by your sides, lift your chest, tighten your abdominals and maintain a very slight arch in your lower back.

#### FINISH

#### ACTION

- Curl the dumbbells forward, then upward, and then toward your shoulders while keeping your elbows at your sides and your upper arms completely still.
- Slowly lower to the starting position by performing the same arcing motion.

## Arm Exercises

### Incline Bench Curls

#### Muscles worked

Biceps and other elbow flexors

#### Bench position

Inclined to 45 degrees

#### Success tips

- Keep tension on the biceps throughout the movement, don't allow the arm to go to full extension.
- Keep your wrist straight.
- Keep your chest lifted, trunk muscles tight and maintain a very slight arch in your lower back.

#### START

#### START

- Grab the dumbbells and sit on the inclined bench and place your feet flat on the floor directly under your knees.
- Hold the dumbbell with a slight bend at the elbow maintaining tension on the biceps.
- Maintain a good spinal alignment with the chest lifted and the abs tight.

#### FINISH

#### ACTION

- Curl the forearms toward the upper arm, keeping your upper arm and shoulder blade completely still.
- Slowly return to the starting position without relaxing the biceps.

### Concentration Curls

#### Muscles worked

Biceps and other elbow flexors

#### Bench position

Flat

#### Success tips

- Do not rock the upper body while bending the elbow.
- Keep your wrist straight.
- Keep your chest lifted, trunk muscles tight and maintain a very slight arch in your lower back.

#### START

#### START

- Sit on the bench sideways and place your feet flat on the floor slightly wider than shoulder width.
- Grab the dumbbell and rest the back of your upper arm against the inside of your leg just above the knee.
- The arm holding the dumbbell should be slightly bent maintaining tension on the biceps.
- Maintain a good spinal alignment.

#### FINISH

#### ACTION

- Curl the forearm toward the upper arm, keeping your upper arm and shoulder blade completely still.
- Slowly return to the starting position without relaxing the biceps.

### Scott Curls — Standing Concentration Curls

#### Muscles worked

Biceps and other elbow flexors

#### Bench position

Inclined to 60 degrees

#### Success tips

- Do not rock the upper body while bending the elbow.
- Keep your wrist straight.
- Keep your chest lifted, trunk muscles tight and maintain a very slight arch in your lower back.
- Stop the arm motion at the top of the movement slightly before your arm is straight up.
- Keep feet slightly wider than shoulder width.

#### START

#### START

- Grab the dumbbell and rest the back of your upper arm against the upper portion of the bench pad.
- The arm holding the dumbbell should be slightly bent maintaining tension on the biceps.
- Place the other arm between the bench and the upper arm.
- Maintain a good spinal alignment.

#### FINISH

#### ACTION

- Curl the forearm toward the upper arm, keeping your upper arm and shoulder blade completely still.
- Slowly return to the starting position without relaxing the biceps.

## Arm Exercises

### Overhead Triceps Extension

#### Muscles Worked

Triceps

#### Success tips

- Keep your knees slightly bent with your feet approximately shoulder width apart.
- Keep your chest lifted, shoulders pinched together and a very slight arch in your lower back.
- Keep your upper arms and shoulders motionless and your wrists straight.
- Tighten your triceps throughout the exercise, using a controlled motion.

START

START

- Stand with your knees slightly bent and feet shoulder width apart.
- Place both hands over the inside edge of one side of the dumbbell weights.
- Bring the arms up over your head with an approximate 90° bend at the elbow.

FINISH

ACTION

- Keeping your upper arms stable, slowly straighten your elbows moving your arms in an arcing motion upward, over your head.
- Stop the motion before your arms are completely straight, and then reverse the motion, slowing returning to the starting position, keeping tension on the muscle.

## Arm Exercises

### Lying Triceps Extension

#### Muscles worked

Triceps

#### Bench position

Flat

#### Success tips

- Keep the upper arm motionless.
- Keep the wrists straight.
- Tighten your triceps throughout the exercise and control the motion all the way down.
- Keep the knees bent and the feet planted on the floor directly under your knees.

START

START

- Lie back on the bench with your head supported on the bench.
- Grab the dumbbells and move your upper arm up to a position that your elbow is facing upward and your hands holding the dumbbells are just over your forehead.
- Raise your chest and pinch your shoulder blades together.
- Maintain a very slight arch in the lower back.

FINISH

ACTION

- Keep the upper arms stationary while moving the hands in an arcing motion upward.
- Stop the motion slightly before locking out the elbows. Do not lock out the elbow!
- Slowly reverse the arcing motion back to the starting position.

### Triceps Kickback

#### Muscles Worked

Triceps

#### Bench position

Flat

#### Success tips

- Maintain spinal alignment.
- Keep your arm at your side and your wrist straight throughout the entire motion.
- Tighten your triceps throughout the exercise and control the motion.

START

START

- Kneel with one leg on the bench, bend forward at the hips and place one hand on the bench.
- Support yourself with one arm on the bench and hold the dumbbell with the other with your palm facing in.
- Keeping your elbow bent, bring your upper arm to your side, parallel to the ground.

FINISH

ACTION

- Straighten the elbow while keeping your upper arm completely still.
- When the arm is completely straight, slowly return to the starting position.

### Hammer Curls

#### Muscles worked

Biceps, brachioradialis and brachialis

#### Success tips

- Keep the upper arms motionless and your wrists straight throughout the entire exercise.
- Keep the chest lifted, spine straight and a slight arch in the low back.

START

START

- Stand with your feet shoulder width apart and knees slightly bent.
- Grab the dumbbells with your palms facing inward toward each other.
- Stabilize the hips, knees and spine.

FINISH

ACTION

- Curl the dumbbells forward, then upward, then in toward the shoulder, keeping the upper arm completely motionless.
- Keep the palms facing in without rotating the lower arm.
- Slowly move back to the starting position.

## Single Arm Row — Alternating Rows

### Muscles Worked

Latissimus Dorsi, teres minor, posterior deltoid and biceps

### Bench position

Flat

### Success tips

- Stabilize your body in position so the effort is focused on your lat as you lead the movement with extending your elbow upward.
- Keep the dumbbell lined up directly under your wrist and elbow when doing the movement.
- Keep your spine aligned, abs tight and a slight arch in your lower back.
- Do not let your spine rotate side to side, keep the shoulder at equal height during the movement.

### START

- Put one knee on the bench and place the other foot on the floor directly under your hip.
- Place free hand on the bench slightly in front of you in a position that allows you to stabilize your upper body.
- Allow the arm with the dumbbell to hang straight down, while maintaining control of your back and shoulder.
- Hold dumbbell in a neutral grip with your palm facing the bench.

### FINISH

### ACTION

- Initiate the movement by pinching your shoulder blades back, while simultaneously moving your elbow backward, then upward.
- Continue moving the elbow up, slightly above the height of your trunk while keeping the forearm lined up under the elbow.
- While controlling the resistance, lower the arm back to the starting position letting the shoulder blade slide forward without slouching.

## Wide Rows

### Muscles worked

Rear deltoid, rear portion of the middle deltoid, posterior rotator cuff, upper lats and teres minor

### Success tips

- Place the feet in a comfortable shoulder width position.
- Keep the chest lifted, abs tight and a very slight arch in the lower back.
- Lean forward slightly at the hip while keeping the upper body in alignment.
- Your forearms should always point in the direction of the dumbbells.

### START

- While standing holding the dumbbells, lean forward at the hip allowing the arms to extend directly in line with the resistance.
- Keep your spine in a stable position.
- Rotate the shoulder so that your palms are facing behind you.

### FINISH

### ACTION

- Allow your arms to bend as you go, move your elbows outward and backward keeping a 70-90 degree angle between your upper arms and your torso.
- Move until your elbows are slightly behind your shoulders, then slowly reverse the action keeping the rear shoulder muscles tightened during the entire motion.

## Dead Lifts

### Muscles worked

Glutes, adductors, hamstrings, quads, spinal erectors and traps

### Success tips

- Keep knees pointed in the same direction as the feet.
- Keep head and neck in line with the trunk.
- Pay close attention to all the alignment and stabilization issues on every part of each repetition.
- Keep pressure through the middle of the arches/feet, not the toes or heels.

### START

### START

- Position your feet in line with the dumbbell about shoulder width apart.
- Point your toes outward slightly and direct the thighs to the same outward angle as the feet.
- Hold the dumbbells with your palms facing backward.

### FINISH

### ACTION

- Under control, slowly squat down by sticking the hips out as the knees start to bend.
- Keep the chest lifted and back flat as the hips continue to move backward.
- Lower to approximately a 90-degree bend at the knees, unless otherwise determined.
- Move back to the starting position, keeping the chest lifted while moving the hips forward and extending the knee.

## Abdominal Exercises

### Ab Crunch

#### Muscles worked

Rectus abdominus and obliques

#### Bench position

Flat

#### Success tips

- Do not lift your head or chin. Your head should follow the rib motion, rather than lead it.
- Maintain normal neck posture.
- Move slowly to eliminate momentum.
- Allow exhalation up and inhalation down, without exaggerating breathing.

START

START

- Grab a dumbbell with both hands, as shown.
- Lie flat on the bench holding the dumbbell over your upper chest.
- Place your legs behind the roller pads, as shown, for added support, with your feet flat on the floor.
- Your lower back can start out flat or in a normal arch.

FINISH

ACTION

- Tighten your abs and only curl your torso, slowly moving your lower ribs toward your hips.
- Move as far as you can without moving the hips and neck.
- The lower back should not lose contact with the bench when fully crunched.
- Slowly reverse the action, returning to the start position keeping tension on the abs throughout the movement.

### Reverse Crunch

#### Muscles worked

Abdominal area, including the rectus abdominus and the obliques

#### Bench position

Flat

#### Success tips

- Tighten your abs before you move.
- Keep knees and hips stationary.
- Allow exhalation up and inhalation down, without exaggerating breathing.
- Contract as far into the movements as possible.
- Lower under control.
- The amount of bend in your hips based upon desired difficulty.
- Beginners should be fully bent, bringing your legs near the abs.

START

START

- Lie on your back with your head resting on the bench.
- Bend your knees fully.
- Determine these positions and maintain throughout the exercise.
- Reach over the head and grasp the bench with each hand.
- Relax the neck.

FINISH

ACTION

- Tighten your abs and slowly curl your hips toward your rib cage.
- Move as far as you can without using your legs to get momentum, and do not curl up onto your shoulder blades.
- Slowly reverse the action and return to the starting position without relaxing.

## Abdominal Exercises

### Lying Trunk Rotation

#### Muscles worked

Deep spinal and trunk muscles

#### Bench position

Flat

#### Success tips

- This is an important exercise but can become high risk if done incorrectly.
- Keep the chest lifted and always maintain a good spinal alignment with a very slight arch in the lower back.
- More range of motion is not necessarily better, especially in this exercise.
- Move only as far as your muscles can take you. Try to eliminate uncontrolled momentum.

START

START

- Lie flat on the bench.
- Bend your hips and knees to approximately 90 degrees.
- Keep your chest lifted, abs tight and a slight arch in your low back.
- Hold onto the sides of the bench.

FINISH

ACTION

- Tighten the entire abdominal area and slowly rotate your legs and hips to one side.
- Move slow and controlled, being careful not to let your legs and hips rotate uncontrolled to the side.
- Move back to the starting position.
- Work one side to fatigue and then do the opposite side.

### Twisting Side Crunch

#### Muscles worked

Obliques and rectus abdominus

#### Bench position

Flat

#### Success tips

- Allow exhalation up and inhalation down.
- Your head should follow the motion of the rib cage. Maintain normal neck posture.
- Move slowly to eliminate momentum.
- Move as far as you can without moving your hips or neck.

START

START

- Lie back flat on the bench and place one hand behind the head of the involved side.
- Place legs behind the roller pads for added support, as shown.
- Your back can start flat against the bench or in a normal arch.

FINISH

ACTION

- Tighten your abs and move in a diagonal direction, slowly moving your ribs to the opposite hip.
- The lower back should not lose contact with the bench when fully crunched.
- Slowly reverse the motion to the starting position without relaxing the abdominal muscles.

## Abdominal Exercises

### Lying Leg Raise

#### Muscles worked

Abdominal area, including the rectus abdominus, obliques and quadriceps

#### Bench position

Flat

#### Success tips

- Tighten your abs before you move.
- Allow exhalation up and inhalation down, without exaggerating breathing.
- Contract as far into the movements as possible.
- Keep your back flat against the bench.

#### START

- Lie on your back with your head resting on the bench.
- Tighten your abs and flatten your back against the bench.
- Bend your knees and hips to 90 degrees.
- Reach to the side and grasp the bench with each hand.
- Relax the neck.

#### ACTION

- Tighten your abs and slowly extend your hips and knees.
- Move your legs away from you keeping them parallel to the floor.
- Keep your back flat against the bench for the entire movement.
- Slowly reverse the action and return to the starting position without relaxing.

## Shoulder Exercises

### Standing Shoulder Press

#### Muscles worked

Front deltoid, upper traps and triceps

#### Success tips

- Keep knees slightly bent.
- Keep abs tight and a good spinal alignment.
- Do not increase the arch in the lower back as you raise your arms. Keep your spine steady.

#### START

- Grab the dumbbells and stand up straight.
- Keep your chest lifted, abs tight and a slight arch in the lower back.
- Raise the dumbbells to shoulder height, keeping your palms facing forward.
- Upper arms should be 90 degrees away from your torso and your elbows should be bent to 90 degrees, as shown.

#### START

#### FINISH

- Straighten your arms slowly over your head, focusing on moving your elbows up and inward toward your ears.
- Straighten your arms slowly over your head, focusing on moving your elbows up and inward toward your ears.
- Slowly return to the starting position, keeping tension on your front shoulder muscles through the entire motion.

#### ACTION

### Lateral Raise

#### Muscles worked

Front and middle deltoids

#### Success tips

- Do not swing the arms upward or move the trunk during the motion.
- Maintain good spinal alignment.

#### START

- Grab the dumbbells with the palms facing each other.
- Stand with your feet slightly wider than shoulder width apart.
- Maintain an erect spinal alignment with the chest lifted, abs tight and a slight curve in the lower back.

#### START

#### FINISH

- Raise arms directly outward, then upward, to approximately shoulder height.
- Lift your hand and elbow at the same speed.
- Do not turn or rotate your arms while raising them.
- Keep the side of your arm/elbow facing out/up throughout the movement.

#### ACTION

## Shoulder Exercises

### Seated Overhead Press

#### Muscles worked

Front deltoid, upper traps and triceps

#### Success tips

- Keep feet flat on the floor and directly under your knees.
- Keep abs tight and a good spinal alignment.
- Do not increase the arch in the lower back as you raise your arms. Keep your spine steady.

START

**START**

- Grab the dumbbells and sit up straight.
- Keep your chest lifted, abs tight and a slight arch in the lower back.
- Raise the dumbbells the shoulder height, keeping your palms facing forward.
- Upper arms should be 90 degrees away from your torso and your elbows should be bent to 90 degrees as shown.

FINISH

**ACTION**

- Straighten your arms slowly over your head, focusing on moving your elbows up and inward toward your ears.
- Slowly return to the starting position, keeping tension on your front shoulder muscles through the entire motion.

## Shoulder Exercises

### Rear Delt Row

#### Muscles worked

Back of the middle deltoid, the rear deltoid, posterior rotator cuff, trapezius and rhomboids.

#### Success tips

- Keep your spine and hips stable and do not allow your body to sway during the motion.
- For normal pulling exercises you may choose to let the shoulder blades float forward and backward naturally. However, for more emphasis to the rear deltoid, keep the shoulder blades pinched together throughout the movement.
- Keep your abs tight, chest lifted and maintain a slight arch in your lower back.

START

**START**

- Stand with your feet approximately shoulder width apart.
- Grab the dumbbells with your palms facing back.
- Bend forward at the knees and hips so that your arms will hang slightly in front of your knees holding the dumbbells.
- Keep your head/neck in line with your spine, as shown.

FINISH

**ACTION**

- Allow your arms to bend as you move your elbows upward keeping a 60-80 degree angle between your arms and your torso.
- Your forearms should always point in the direction of the dumbbells.
- Move till your elbows are slightly behind your shoulders, then slowly reverse the motion, keeping tension on the rear shoulder muscles during the entire motion.

### Front Raise

#### Muscles worked

Front deltoid

#### Success tips

- Keep knees slightly bent.
- Keep abs tight and a good spinal alignment.
- Do not increase the arch in the lower back as you raise your arms. Keep your spine steady.

START

**START**

- Grab the dumbbells and stand up straight.
- Feet should be approximately shoulder width apart.
- Keep your chest lifted, abs tight and a slight arch in the lower back.
- Hold the dumbbells in front of you with your palms facing back.

FINISH

**ACTION**

- Keep the arms straight and the palms facing down, move your arms forward and then upward to shoulder height.
- Slowly return to the starting position, keeping tension on your front shoulder muscles through the entire motion.

### Shrugs

#### Muscles worked

Upper trapezius

#### Success tips

- Do not bend the neck backward or forward while raising the shoulders.
- Keep abs tight and a good spinal alignment.
- Make sure both shoulders are raised evenly.

START

**START**

- Grab the dumbbells and stand up straight.
- Feet should be approximately shoulder width apart.
- Keep your chest lifted, abs tight and a slight arch in the lower back.
- Hold the dumbbells naturally to your sides.

FINISH

**ACTION**

- Raise your shoulders toward the back of your head, making sure your neck/head position does not move.
- Slowly return the shoulders to the starting position, keeping tension on your upper shoulder and neck muscles through the entire motion without slouching or rounding your upper spine.

## SELECT TECH MENU PLAN

### For Females

You may choose plan A, B, C or D for each meal or snack

#### BREAKFAST: 300-335 calories

- A. 1/2 New York style bagel (125)  
2 TBSP of cream cheese or 1 TSP of peanut butter (100)  
1 cup of orange juice (110)
- B. 1/2 serving of Champion Metabolol II (130)  
1 cup of 1% milk (200)
- C. 1 cup of Honey Nut Cheerios (115)  
1/2 cup of 1% milk (100)  
1 cup of orange juice (110)
- D. 1 egg, any style (80)  
1 slice of whole-grain bread (75)  
1 cup of orange juice (110)  
1 TSP of butter or margarine (35)

#### MORNING SNACK: 180-215 calories

- A. 1/2 serving of Champion Met Max (115)  
1/2 cup of 1% milk (100)
- B. 1 Champion SnacBar (180)
- C. 1 cup of 1% low-fat cottage cheese (180)
- D. 6 oz. of Yoplait 99% fat free yogurt (180)

#### LUNCH: 350-380 calories

- A. 2 slices of whole-grain bread (150)  
1.5 oz. of turkey, ham, chicken or tuna fish (75)  
1 TBSP of light mayonnaise (50)  
(lettuce, tomato, onion and pickles optional)  
1 serving of medium-sized fruit (100)
- B. 3 oz. of boneless, skinless chicken breast (150)  
3/4 cup of cooked rice (preferably brown) (150)  
1 cup of broccoli (80)
- C. 1 serving of Champion Metabolol II (260)  
1/2 cup of 1% milk (100)
- D. Frozen Microwave meal of no more than 350 calories. You may choose from Healthy Choice, Lean Cuisine or Michelina's Authentico, for example.

#### AFTERNOON SNACK: 180-215 calories

- A. 1/2 serving of Champion Met Max (115)  
1/2 cup of 1% milk (100)
- B. 2 servings of medium-sized fruit (200)
- C. 1 cup of 1% low-fat cottage cheese (180)
- D. 6 oz. of Yoplait 99% fat free yogurt (180)

#### DINNER: 350-360 calories

- A. 3 oz. of Chicken, Turkey or Fish (150)  
1/2 medium baked potato or 1/2 cup of cooked rice (preferably brown) (100)  
Side salad with 2 TBSP of low-fat dressing or 2 cups of broccoli (100)
- B. Frozen Microwave dinners of no more than 350 calories. You may choose from Healthy Choice, Lean Cuisine or Michelina's Authentico, for example.
- C. 1 serving of Champion Metabolol II (260)  
1/2 cup of 1% milk (100)
- D. 1 oz. spaghetti, American Beauty, thin, uncooked (105)  
3 oz. ground turkey, Louis Rich (140)  
1/2 cup of tomato sauce (30)  
1 cup of desired vegetables sautéed with ground turkey (80)

#### EVENING SNACK (optional): 100-180 calories

- A. 1 Champion SnacBar (180)
- B. 1 serving of medium-sized fruit (100)

CHAMPION CREATINE SUPPLEMENT: On weight-training days, please take one serving before your workout and one serving after your workout. CREATINE CALORIES...280 on workout days.

BEVERAGES: Please follow the hydration program for your water intake. You may also have soft drinks, tea or coffee as long as it's calorie and caffeine free. This would be in addition to your water.

TOTAL CALORIES WILL DEPEND ON WHETHER YOU CHOOSE OPTION A, B, C OR D DURING THE DAY

Workout days: LOW 1640 HIGH 1785

Off days: LOW 1360 HIGH 1505

## SELECT TECH MENU PLAN

### For Males

You may choose plan A, B, C or D for each meal or snack

#### BREAKFAST: 455-490 calories

- A. 1 New York style bagel (250)  
2 TBSP of cream cheese or 1 TSP of peanut butter (100)  
1 cup of orange juice (110)
- B. 1 serving of Champion Metabolol II (260)  
1 cup of 1% milk (200)
- C. 2 cups of Honey Nut Cheerios (230)  
3/4 cup of 1% milk (150)  
1 cup of orange juice (110)
- D. 2 eggs, any style (160)  
2 slices of whole-grain bread (150)  
1 cup of orange juice (110)  
1 TSP of butter or margarine (35)

#### MORNING SNACK: 280-315 calories

- A. 1/2 serving of Champion Met Max (115)  
1 cup of 1% milk (200)
- B. 1 Champion SnacBar (180)  
1 serving of medium-sized fruit (100)
- C. 1 cup of 1% low-fat cottage cheese (180)  
1 serving of medium-sized fruit (100)
- D. 6 oz. of Yoplait 99% fat free yogurt (180)  
1 serving of medium-sized fruit (100)

#### LUNCH: 425-460 calories

- A. 2 slices of whole-grain bread (150)  
3 oz. of turkey, ham, chicken or tuna fish (150)  
1 TBSP of light mayonnaise (50)  
(lettuce, tomato, onion and pickles optional)  
1 serving of medium-sized fruit (100)
- B. 3 oz. of boneless, skinless chicken breast (150)  
1 cup of cooked rice (preferably brown) (200)  
1 cup of broccoli (80)
- C. 1 serving of Champion Metabolol II (260)  
1 cup of 1% milk (200)
- D. Frozen Microwave meal of no more than 350 calories. You may choose from Healthy Choice, Lean Cuisine or Michelina's Authentico, for example.  
1 slice of whole-grain bread (75)

#### AFTERNOON SNACK: 280-315 calories

- A. 1/2 serving of Champion Met Max (115)  
1 cup of 1% milk (200)
- B. 1 Champion SnacBar (180)  
1 serving of medium-sized fruit (100)
- C. 1 cup of 1% low-fat cottage cheese (180)  
1 serving of medium-sized fruit (100)
- D. 6 oz. of Yoplait 99% fat free yogurt (180)  
1 serving of medium-sized fruit (100)

#### DINNER: 425-460 calories

- A. 3 oz. of chicken, turkey or fish (150)  
1 medium-sized baked potato or 1 cup of cooked rice (preferably brown) (200)  
Side salad with 2 TBSP of low-fat dressing or 2 cups of broccoli (100)
- B. Frozen Microwave dinners of no more than 350 calories. You may choose from Healthy Choice, Lean Cuisine or Michelina's Authentico, for example.  
1 slice of whole-grain bread (75)
- C. 1 serving of Champion Metabolol II (260)  
1 cup of 1% milk (200)
- D. 2 oz. spaghetti, American Beauty thin, uncooked (210)  
3 oz. ground turkey, Louis Rich (140)  
1/2 cup of tomato sauce (30)  
1 cup of desired vegetables sautéed with ground turkey (80)

**WHAT IS COVERED**

Bowflex® warrants to the original purchaser of the Bowflex that the Bowflex is free from defects in materials or workmanship, with the exceptions stated below. This warranty is not transferable or applicable to any person other than the original purchaser and is only applicable for products sold and used in the United States or Canada. Tampering with the unit will void the warranty.

**BOWFLEX® SelectTech DUMBBELLS**

- Parts (including handle assembly and base assembly): 2 years
- Weight Plates: 5 years
- Labor: 1 year from the date of original purchase

**WARRANTIES DO NOT COVER**

- Bowflex® SelectTech™ Dumbbells home gym purchased for commercial or institutional use.
- Damage due to use by persons who weigh more than 300 pounds.
- Damage due to abuse, accident, failure to follow instructions or warnings in the Owner's Manual, misuse, mishandling, accident or Acts of God (such as floods or power surges).
- Damage due to normal wear and tear.

**WHAT WE WILL DO**

During your Warranty Coverage Period, Bowflex® will repair any Bowflex SelectTech Dumbbells that proves to be defective in materials or workmanship. In the event repair is not possible, Bowflex will either replace your Bowflex SelectTech Dumbbells or refund your purchase price, less shipping and handling.

**SERVICE SUPPORT**

Call to speak to a Bowflex Representative at 1-800-605-3369. You may need to return the defective part, at your expense, to the address given to you by a Bowflex Representative. Always include an explanation of the problem. Adequate protective packaging of the defective parts or unit and cost of shipping are your responsibility.

The repaired part or unit will be returned to you at the company's expense.

**HOW STATE LAW APPLIES**

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.
