

insta-bed™ raised bed

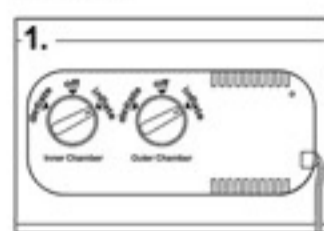

With Built-in 120v AC Pump U.S. Patent Issued
Multiple Patents Pending
Item: 822547

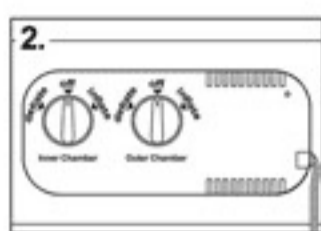

For better protection of this product, never unfold or inflate the airbed in temperatures below freezing, avoid extensive exposure to the sun and protect from contact with sharp objects and rough ground. Make sure to handle the pump with care. Avoid pounding and jumping to prevent damage to the airbed material.

Inflating and Deflating Instructions (Before inflating, Plug into AC Power outlet.)

Inflate:

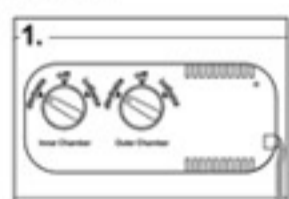

Turn both the Outer Chamber and Inner Chamber Control Dials clockwise to the "Inflate" position to inflate the 2 Chambers.

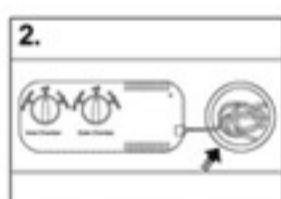

Turn both the Control Dials counter-clockwise to the "Off" position upon reaching desired firmness. Make sure the switches align with the "Off" arrow.

Deflate:

Turn both the Inner Chamber and Outer Chamber Control Dials counter-clockwise to the "Deflate" position for complete deflation. Turn both Control Dials clockwise to the "Off" position.

Once mattress is completely deflated, turn both Control Dials clockwise to the "Off" position, and place cord in the "cord storage pocket".

PLEASE READ, FOLLOW, AND SAVE THESE WARNINGS AND INSTRUCTIONS

⚠ DANGER

A risk of fire and electrical shock exists in all electrical appliances or devices, which may cause death or serious injury. When using electrical appliances or devices, basic safety precautions should always be followed to reduce the risk of fire, electric shock, and injury to persons, including the following.

- Read all instructions before using this device.
- Close supervision is necessary when any electrical device is used near children.
- This device is not for use by children.

To reduce the risk of electric shock, this device has a polarized plug (one blade is wider than the other).

This plug will fit in a polarized outlet only one way. If the plug does not fit fully in the outlet, reverse the plug.

If it still does not fit fully in the outlet, call a qualified electrician for help.

- DO NOT attempt to defeat this safety feature.
- DO NOT change or modify the plug in any way.
- DO NOT operate this device if the cord or plug is frayed or damaged or if has been exposed to water.
- DO NOT operate any damaged appliance.
- DO NOT operate with a damaged cord or plug, or after the device malfunctions or has been dropped or damaged in any manner.
- DO NOT use or place the power cord on or near heated surfaces
- DO NOT use or place the power cord in or near water or wet surfaces
- DO unplug this device from the electrical outlet when not in use or before cleaning.

This device is operated with an electrically operated pump. The pump is thermally protected. The pump does not contain parts that can be repaired or serviced. Opening the pump case will expose you to electric shock.

- DO NOT open the pump case for any reason.
- DO NOT use on surfaces where heat may cause a problem.
- A fire may occur if this devices touches or is covered by flammable material, including curtains, draperies, walls, etc., when in operation.
- DO NOT place any flammable material such as paper, cardboard, plastic on the pump.
- DO NOT operate the pump in enclosed spaces that are not well-ventilated
- DO NOT operate in the presence of explosive and/or flammable fumes.
- DO NOT operate the pump where aerosol (spray) products are being used, where oxygen is being administered, or near other flammable materials, for example, curtains, draperies, or blankets.
- DO NOT place any part of the pump or cord in or under water or other liquid. See instructions for cleaning.
- DO NOT use outdoors or while standing in damp area.
- Unplug from outlet when not in use and before cleaning. Always turn all controls to the OFF position before unplugging. Allow to cool before attaching or removing parts and before cleaning the device.
- DO NOT leave device unattended when in operation.
- DO NOT use device except as intended.
- DO NOT use attachments not recommended by the manufacturer.

Your failure to follow these instructions will result in electric shock or electrocution, which will result in death or serious injury.

CAUTION: A short power supply cord is provided to reduce the risk of personal injury resulting from becoming entangled in or tripping over a longer cord. Extension cords are available from local hardware stores and may be used if care is exercised in their use. If an extension cord is required, special care and caution is necessary. Also the cord must be: (1) marked with an electrical rating of 125 V, and at least 13 A., 1625 W., and (2) the cord must be arranged so that it will not drape over a bed or other surface where it can be pulled on by children or tripped over accidentally.

This appliance is double insulated. In a double-insulated product, two systems of insulation are provided instead of grounding. No grounding means is provided on a double-insulated product, nor is a means for grounding to be added to the product. Servicing a double-insulated product requires extreme care and knowledge of the system, and is to be done only by qualified service personnel. Replacement parts for a double-insulated product must be identical to the parts they replace.

ELECTRIC POWER: If electric circuit is overloaded with other appliances, your device may not operate properly. It should be operated on a separate electric circuit from other operating appliances .

Use and Care Instructions

1. DO NOT exceed 5 minutes of continuous inflation/deflation time.
2. In case the pump overheats due to excessive continuous inflation/deflation, the power will automatically cut-off, the power indicator light will be on. The pump will reset and begin working within 30 minutes, at which time the power indicator light will be off.
3. DO NOT drop or insert any object into any opening.
4. DO NOT operate the pump with air openings blocked. Keep air openings free of lint, hair, and other obstructions.
5. DO NOT obstruct ventilation holes on pump.
6. DO NOT over inflate.
7. DO clean airbed with only mild soap and water.
8. DO NOT unfold or inflate the airbed in temperatures below freezing.
9. DO avoid extensive exposure to the sun.
10. DO protect from contact with sharp objects and rough ground.
11. DO handle the pump with care.

Note:

Airbed material may stretch during first use and may need additional air to reach desired firmness. Air inside of bed may expand and contract with varying temperatures potentially leading to reduced pressure of the bed. If this occurs, simply add more air using the built-in pump to achieve desired firmness.

Repairing (Repair kit included)

First, deflate the bed by following the instructions for deflation. Clean and repair the affected area thoroughly. Cut a piece of clear patch material (include in the repair kit) into a size that will cover the puncture. Apply the self-adhesive patch over the affected area by peeling off the backing and placing sticky side down on airbed. Rub patch to ensure adhesion. Allow four (4) hours for repair to set before attempting to inflate the airbed.
