*Tanning & Skin
Beautifying in One*

ETS, the leader in commercial tanning equipment, now brings you professional level light technology, combined with tanning. Now your salon can offer photomodulation beauty treatments with or without tanning using a single bed. Offer your customers a way to rejuvenate AND get a great looking tan at the same time!

The ETS Rejuvasun spa bed will allow your salon to...

- virtually eliminate any slow season with a new beauty treatment that is in increasing demand
- attract new clientele seeking affordable and non-invasive rejuvenation technology
- add a new revenue stream to your bottom line with no added staff or training costs
- stand out from tanning-only salons by offering a spa-like service at a fraction of the cost

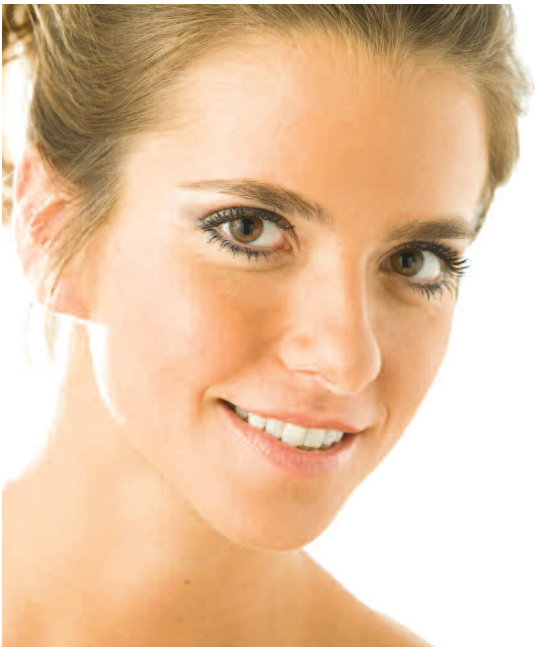

ETS RejuvasunTM – Going beyond tanning!

The **Rejuvasun** spa bed comes equipped with a special non-tanning, pulsating LED (light-emitting diode) unit, giving off low-energy light pulses in specific frequencies and colors of light that can help skin appear smoother and younger looking. Offer your customers a way to rejuvenate AND get a great looking tan at the same time - opening a great new revenue channel for you!

Cosmetic light treatments usually go for hundreds of dollars per session. Now, you can offer **Rejuvasun** LED technology in your salon, increasing revenue, customers and customer satisfaction and for only pennies a session. The process takes only 20 minutes with no recovery time, redness, or peeling.

The LED unit operates separately from the tanning lamps, allowing you to offer three options with one bed; beauty enhancing session alone, tanning session alone, or both in a single session. There are other rejuvenating units available in the marketplace, but none like the patent-pending **Rejuvasun** spa bed.

Add RejuvaSkin™ products to your sessions for even better results!

You can look even more fabulous by adding our specially formulated creams and cleansing products designed to work with the **Rejuvasun** technology. **RejuvaSkin** is a specially designed skin care regime designed to maximize the effects of the **Rejuvasun** sessions. A simple 3 part process done on a regular basis will help your skin achieve a smoother, more youthful appearance and texture.

Refine - Step 1 is a double-sided pre-moistened cleansing and exfoliating towelette that prepares your skin for the best results of your tanning or skin rejuvenating session. The exfoliating side helps gently remove make-up, oils, and other facial debris (dust, sweat, etc.). The cleansing side pre-conditions the skin for receiving photomodulation and tanning.

Repair - Step 2 is a collagen enhancing mask for intensive renewal and improved skin tone. The mask assists in helping to amplify line and wrinkle reduction. This can help your skin appear renewed, repaired and more youthful.

Rebuild - Step 3 is a renewing and restructuring cream that includes a gentle bronze glow. It helps restore and rebuild essential vitamins and nutrients to the skin that are lost through the normal aging process.

Why just tan when you can have beauty treatments as well?

The combination of UV exposure and Rejuvasun light stimulation can improve your overall mood and sense of well being and can help you maintain a younger and healthier look everyday!
