

Odea - Odea Giro (Technology and Features)

Ceramic Grinder

For perfect-tasting coffee every time. The ceramic grinder is Saeco's most recent innovation, available in all new models of the Saeco range of automatic coffee machines. After careful research, Saeco finally chose this material to put an end to grinding with metal components. Ceramic is inert, and thus ensures the best results without altering the flavour of the coffee. Moreover, it is perfectly safe to use. The new ceramic grinder also provides a more consistent grind, allowing perfect dosing and blending, and giving you more control over the density and body of your coffee. And that's not all - the amount of coffee residue left in the cup is substantially reduced. Long-lasting, minimum noise! Thanks to its sturdy build, the ceramic coffee grinder will quietly grind to the same consistency and high standards for a longer period of time.

Touch Lift

The drip tray can be easily raised or lowered manually or electrically with a simple touch, allowing for different cup sizes. Espresso cups or glasses can easily be accommodated.

Pannarello Frothing Device

The Pannarello frothing device dispenses steam in three different directions and makes it easy to froth milk for cappuccinos and lattes. It also dispenses hot water for making hot drinks and soups, and is completely removable for easy cleaning.

Aqua Prima Water Filter

The Aqua Prima water filter was developed to remove impurities from your water that alter the taste of your coffee. The AquaPrima water filter's purpose is to improve the taste of your coffee while protecting your machine from lime scale damage.
